This table shows how many allocated number ranges of each type have been assigned to a particular Service Charge level.

(Those not assigned are classed as TBC.)

It aims to show (in red) those cases where the Service Charge level reflects a significant change in the benefit to the Service Provider and the cost to the caller - effectively creating, or moving to, a new range.

The areas highlighted in blue reflect reasonable variations made in converting the old scheme to the new.

"Call Types" become 'Service Charge' levels
